PRODUCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGH FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGH FULLY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BEC. OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl}(N) = D-fructose + {(1,6)-alpha-D-glucosyl}(N+1).

SUBCELLULAR LOCATION: Secreted.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              483

Biochem. Parasitol. 55:115-126(1992).

-i- CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phosphate
-i- CATALYTIC ACTIVITY: D-glyceroyl phosphate + NADH.
-i- PATHWAY: Second phase of glycolysis; first step.
-i- SUBUNIT: Homotetramer.
-i- SUBCELIULAR LOCATION: Cytoplasmic.
-i- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
-i- SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-APR-1993
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Glyceraldehyde
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-FEB-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                        This SWISS-PROT entry is copyright. Bacteriol. 175:7918-7930(1993).

CATALYTIC ACTIVITY: D-glyceraldehyde 3-phosphate + phonaphother and the phosphate + NADH.

NAD(+) = 3-phospho-D-glyceroyl phosphate + NADH.

PATHWAY: Second phase of glycolysis; first step.

SUBUNIT: Homotetramer (By similarity).

SUBCELLULAR LOCATION: Cytoplasmic.

SIMILARITY: Belongs to the glyceraldehyde 3-phosphate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               dehydrogenase family.

The sialic acid recognition site may be masked by cis interactions with sialic acids on the same cell surface.

-! SUBCELFULAR LOCATION: Type I membrane protein.

-! TISSUE SPECIFICITY: Predominantly expressed by immature monocytic/myeloid lineage cells in bone marrow. Also found at lower levels in mature neutrophils and monocytes.

-! DOMAIN: Contains an intracycoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITM). This motif is involved in downmodulation of cellular functions as the termination of the immune response.

-! SIMILARITY: Belongs to the immunoglobulin superfamily. SIGLEC (SIALIC ACID BINDING IG-LIKE LECTIN) SUBSAMILY.

-! SIMILARITY: Contains 1 immunoglobulin-like V-type domains.

-! SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene

 CC vector, a seed or tuber from the transgenic plant, ta paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransforase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant and inducing expression of the CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet.

CC Glucans are useful as substitutes for and additions to modified starch CC and latexes in paper manufacture. Unlike prior art techniques, which CC manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials that produce chemical effluents, paper CC environmentally friendly. Moreover, clucans also exhibit thermonlastic

 CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the CC regenerated plant, where the vector contains a transit sequence from CC ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and CC chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch CC and latexes in paper manufacture. Unlike prior art techniques, which CC require input materials that produced by GTF, which utilises CC biologically produced input materials; is more cost-effective and CC intermentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

CC Mote: The present sequence is not shown in the specification but was created by the indexer using the GTFD sequence appearing as AAU98029 and the information in claim 36.

 CC The invention an isolated protein comprising a glucosyltransferase CC (GTF) B polypeptide having changes at position from I448V, D457N, CC D567T, K1014T, D457N/D567T, D457N/D571K, D557TK/K1014T, L48V/D457N/D567T/D571K, D567T/D571K, CC D567T/D571K/K1014T, 1448V/D457N/D567T/D571K/K79Q/K1014T, CC D567T/D571K/K1014T, and K779Q or a GTF D polypeptide having CC changes at positions from T589D, N471D, M471D/T589D, and CC CARAGES Also included are a glucan produced by the GTF mutant, CC an isolated polynucleotide which encodes P1 or P2, or its complementary CC polynucleotide, a ribboucleid acid sequence encoding the GTF mutant, CC an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the polynucleotide operably linked to a cc promoter, a vector comprising the expression cassette, host cell CC introduced with the vector, a transgenic plant comprising the cc vector, a seed or tuber from the transgenic plant comprising the composition comprising a glucan produced in a plant transformed CC coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line CC comprising the glucan (paner sizing, wild-type or mutant and a paper CC comprising the glucan (paner sizing/coating agent) The vector is "ne="iil" composition of the ducan (paner sizing/coating agent) The vector is "ne="iil" composition of the glucan (paner sizing/coating agent) The vector is "ne="iil" composition of the glucan (paner sizing/coating agent) The vector is "ne="iil" composition of the glucan (paner sizing/coating agent) The vector is "ne="iil" composition of the glucan (paner) The vector is "ne="iil" composition of the glucan (paner) The vector is "ne="iil" composition of the glucan (paner) The vector is "ne="iil" composition of the glucan (paner) The glucan paper composition of the gluc
 RESULT
 chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

The present sequence represents a GTFD mutant of the invention.
 Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions
 comprising the glucan (paper sizing/coating agent). The vector is useful for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and other products and contains a transit sequence from the plant where the vector contains a transit sequence from the plant was plant to produce the plant where the vector contains a transit sequence from the plant was plant to produce the plant was plant to produce the plant was plant to produce the plant and plant the plant

 cc polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, cc an expression cassette comprising the polynucleotide operably linked to a compression cassette, a vector comprising the expression cassette, host cell controluced with the vector, a transgenic plant comprising the vector coating composition comprising the expression cassette, host cell coating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, ct thermoplastic molecule or their combinations or glucan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan is produced in the amyloplast and/or vacuole or a maize line comprising the glucan in a plant transforming a comparising the glucan in plant. The method comprises transforming a comparising the glucan in a plant. The method comprises transforming a complications to produce a regenerated plant and inducing expression of the collumn cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polynucleotide for a time sufficient to produce a transit sequence from cribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chorophyl AB binding protein to produce a transgenic plant, and glucan cis produced in the amyloplast of potato or the vacuole of sugar beet. Cc and latexes in paper manufacture. Unlike prior art techniques, which creatian that produced by GTF, which utilises biologically produced input materials, is more cost-effective and centuring ordered by the indexer using the GTFB mutant of the invention.

Cc note: The present sequence is not shown in the specification but of the information in claim 36.

 Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-1756) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosy transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This
 Sequence
 The DNA sequence from Streptococcus sobrinus strain 6715 encodes glucosyltransferase-I (and mutants). The DNA was obtd. by treating S. sobrinus 6715 with mutanolysin, extracting the chromosomal DNA, partially digesting with Sau3AI and fractionating on agarose gel. The 3-5 kbp fragment was ligated into pUC18 and E. coli JM109 transformed with it. A GT-1 expressing clone was isolated and sequenced. The clone may be used in the development of a drug for

 chlorophyll AB binding protein to produce a transgenic plant, and glucatis produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step.

The present sequence represents GTFB.
The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N, D567T, X1014T, D457N/D57TX, D457N/D57TX, D567T/D571K, D567T/D571K/X1014T, 1448V/D457N/D567T/D571K/K779Q/K1014T,

Glu
 CC vector, a seed or tuber from the transgenic plant, a paper sizing and/or coating composition comprising a glucan produced in a plant transformed CC with a gene encoding the mutant GTF, wild type or, starch, a latex, CC thermoplastic molecule or their combinations or glucan and starch where CC the glucan is produced in the amyloplast and/or vacuole or a maize line CC deficient in starch biosynthesis, transformed with a gene encoding a CC glucosyltransferase B or D enzyme, wild-type or mutant and a paper CC comprising the glucan (paper sizing/coating agent). The vector is useful CC for producing a glucan in a plant. The method comprises transforming a CC plant cell with the vector, growing the plant cell under plant growing CC conditions to produce a regenerated plant and inducing expression of the CC polynucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from CC conditions biphosphate carboxylase small subunit, waxy, brittle-1 and CC cinlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. CC glucans are useful as substitutes for and additions to modified starch CC and latexes in paper manufacture. Unlike prior art techniques, which crequire input materials that produce chemical effluents, paper CC biologically produced input materials, is more cost-effective and CC commentally friendly. Moreover, glucans also exhibit thermoplastic CC properties and impart gloss to the paper during coating step.

CC The present sequence represents a GTFB mutant of the invention.

CC Mote: The present sequence is not shown in the specification but composition in claim 36.

 require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in climm is
 chlorophyll AB binding protein to produce a transgenic plant, and gluce is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which
 The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM p-1756) or mouse-hybridoma MHP136 (FERM p-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related

 (Sucrose 6-glucosyltransferase)
 N
 AGGREGATION OF BACTERIAL CELLS AND FOOD DEBRIS.

CATALYTIC ACTIVITY: Sucrose + {(1,6)-alpha-D-glucosyl} (N) = D-fructose + {(1,6)-alpha-D-glucosyl} (N+1).

SUBCELLULAR LOCATION: Secreted.

DISEASE: DENTAL CARIES.

MISCELLANEOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (ALPHA MISCELLANEOUS: GTF-I SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,5-LINKED GLUCCASE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SYNTHESIZES BOTH FORMS OF GLUCANS.

SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES AND SOME TO A GLUCAN-BINDING PROTEIN FROM S.MUTANS.

SIMILARITY: Contains 19 cell wall binding repeats.
 FUNCTION: PRODUCTION OF EXTRACELLULAR GLUCANS, THAT ARE THOUGHT TO PLAY A KEY ROLE IN THE DEVELOPMENT OF THE DENTAL PLAQUE BECA OF THEIR ABILITY TO ADHERE TO SMOOTH SURFACES AND MEDIATE THE

 ructose + {(1,6)-alpha-D-glucosyl}(N)
subcellular Locarion: Secreted.
DISEASE: DENTAL CARIES.
MISCELLANDON:
 FORMS OF GLUCANS.
SIMILARITY: TO OTHER GLUCOSYLTRANSFERASES
BINDING PROTEIN FROM S.MUTANS.
 MISCELLANEOUS: GTF-I SYNTHESIZES WATER-INSOLUBLE GLUCANS (AL
1,3-LINKED GLUCOSE AND SOME 1,6 LINKAGES), GTF-S SYNTHESIZES
WATER-SOLUBLE GLUCANS (ALPHA 1,6-GLUCOSE). GTF-SI SYNTHESIZE
 BINDING PROTEIN FROM S.MUTANS.
SIMILARITY: Contains 6 cell wall binding repeats.

 SIMILARITY: Contains 1 immunoglobulin-like V-type domain. SIMILARITY: Contains 2 immunoglobulin-like C2-type domains.
 dependent binding to cells. Preferentially binds to alpha2,3-linked sialic acid. The sialic acid recognition site may be masked by cis interactions with sialic acids on the same cell surface. SUBCELLULAR LOCATION: Type I membrane protein.
TISSUE SPECIFICITY: Predominantly expressed by immature monocytic/myeloid lineage cells in bone marrow. Also found at
 immunoreceptor tyrosine-based inhibitor motif (ITIM). This is involved in downmodulation of cellular functions as the termination of the immune response. SIMILARITY: Belongs to the immunoglobulin superfamily. SIGI
 DOMAIN: Contains an intracytoplasmic motif referred as immunoreceptor tyrosine-based inhibitor motif (ITIM).
 lower levels in mature neutrophils and monocytes.
 SIMILARITY: Belongs to the immunoglobulin superfamily. SIGLEC (SIALIC ACID BINDING IGLIKE LECTIN) SUBFAMILY.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 Anti-caries agent composed of a monoclonal antibody against inhibitory enzyme against water insoluble glucan synthetase transferase-B (GTF-B) of Streptococcus mutans
 JP2002114709-A.
 inhibitive activity against water insoluble glucan synthetase of glucos transferase B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
 The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having

 The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17565) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
 The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM p-1756) or mouse-hybridoma MHP136 (FERM p-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
 Anti-caries agent composed of a monoclonal antibody against inhibitory enzyme against water insoluble glucan synthetase transferase-B (GTF-B) of Streptococcus mutans

 ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents GTFB.

 chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence appearing as AAU98027 and the information in later 12 m as

 The DNA sequence from Streptococcus sobrinus strain 6715 encodes glucosyltransferase-I (and mutants). The DNA was obtd. by treating sobrinus 6715 with mutanolysin, extracting the chromosomal DNA, partially digesting with sau3AI and fractionating on agarose gel. The 3-5 kbp fragment was ligated into pUC18 and E. coli JM109 transformed with it. A GT-1 expressing clone was isolated and seguenced. The clone may be used in the development of a drug for

 No. is the number of results predicted by chance to have a greater than or equal to the score of the result being printed, s derived by analysis of the total score distribution.
